

BLUE GOBLIN

Mobile Foam Compaction and Recycling Solutions

PVC Carpet Recycling

Blue Goblin is proud to work with Tandus Centiva to provide an innovative recycling solution for vinyl-backed carpet tiles. By palletizing tiles at your job site and shipping them directly to Tandus to be recycled into new carpet, Blue Goblin saves you money and simplifies your waste disposal process, all while helping our environment.

How It Works

- 1. Get the Project Approved.** Contact Blue Goblin to either confirm that your carpet is a Tandus Centiva product or have a sample approved by Tandus, and to confirm that your carpet has not come in contact with asbestos.
- 2. Make an Appointment.** If carpet has been taken up, Blue Goblin will palletize on site and remove. If carpet is still installed, Blue Goblin can take it up, palletize and remove.
- 3. Consider LEED credits.** Blue Goblin can work with your project administrator to document eligible LEED or other certification credits.
- 4. That's it!**

Nationwide, 72% of all construction waste is landfilled.

Why Recycle?

Cost savings. Blue Goblin recycling is typically cheaper than having debris containers hauled to a landfill. Recycling also avoids landfill tipping fees.

Streamlined process. Blue Goblin's process removes carpet tiles from your demolition project before they become part of your mixed waste stream, cutting down on sorting and general disposal needs.

Environmental advantages. Recycling vinyl-backed carpet saves landfill space, conserves water and raw material resources, saves energy, prevents greenhouse gas emissions, and reduces our oil dependency. Tandus' carpet recycling program diverts up to 15 million pounds of carpet each year from landfills.

Comprehensive services. Besides recycling carpet tiles, Blue Goblin can recycle roofing and wall insulation, ceiling tiles, and many other renovation and demolition by-products – ask us how we can help with your specific needs.

Blue Goblin palletizes and ships carpet directly from your job site.

Tandus Centiva introduced the flooring industry's first closed-loop recycling program, ReStart®, in 1994. Tandus converts take-back carpet waste into new recycled-content floor coverings, so less than 0.1 ounce per square yard of reclaimed material is landfilled. To date, Tandus has reclaimed and recycled more than 268 million pounds of flooring waste.
