*Mobile Foam Compaction and Recycling Solutions*

## Ceiling Tile Recycling

Blue Goblin is proud to join forces with Armstrong to provide an innovative recycling solution for mineral fiber and fiberglass ceiling tiles. By baling tiles at your job site and shipping them to Armstrong to be recycled into new ceilings, Blue Goblin saves you money and simplifies your waste disposal process, all while helping our environment.

### How It Works

- 1. Get the Project Approved.** Contact Blue Goblin to confirm that your tiles are the correct type (fiberglass or mineral fiber), have not been damaged by water or paint, have no asbestos risk, and meet Armstrong's recycling requirements.
- 2. Make an Appointment.** If tile is on the ground when we arrive, Blue Goblin will bale tiles on site and remove bales. If tile is suspended, Blue Goblin can take it down for you, bale and remove.
- 3. Consider LEED credits.** Blue Goblin can work with your project administrator to document eligible LEED or other certification credits.
- 4. That's it!**

*Nationwide, 72% of all construction waste is landfilled.*

*Blue Goblin bales and ships tile directly from your job site.*

### Why Recycle?

**Cost savings.** Blue Goblin recycling is typically cheaper than having debris containers hauled to a landfill. Recycling also avoids landfill tipping fees.

**Streamlined process.** Blue Goblin's process removes ceiling tiles from your demolition project before they become part of your mixed waste stream, cutting down on sorting and general disposal needs.

**Environmental advantages.** Recycling ceiling tiles saves landfill space, conserves water and raw material resources, saves energy, and prevents greenhouse gas emissions. Recycling just 10,000 ft<sup>2</sup> of tile saves enough energy to power a home for 7 months and reduces emissions as much as taking a car off the road for 18 months.

**Comprehensive services.** Besides recycling ceiling tiles, Blue Goblin can bale metal frame ceiling supports, recycle roofing and wall insulation, and recycle other renovation and demolition by-products – ask us how we can help with your specific needs.

Since it began in 1999, Armstrong's ceiling tile recycling program has diverted over 77,500 tons of ceilings from landfills. Armstrong is a global leader in this industry, and in 2015 was honored with *Environmental Leader's* Top Product Award for innovation in environmental and energy performance.
